QUESTION NO: 1

You need to monitor the resources for the Beijing office.

Which three components should you implement?

NOTE: Each correct answer presents part of the solution.

- A. search
- B. proxy settings
- C. Distributed Cache
- D. SAML authentication
- E. claims authentication

ANSWER: B D E

QUESTION NO: 2

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You need to monitor the environment.

You create a performance data collector set.

Does the solution meet the goal?

- A. Yes
- B. No

ANSWER: A

QUESTION NO: 3 - (HOTSPOT)

You are planning the hybrid environment for OneDrive for Business.

You need to determine what the end-user experience will be for Dallas and Seattle SharePoint users.

What should you conclude? To answer, select the appropriate end-user experience from each list in the answer area.

Hot Area:

Answer Area

End-users

OneDrive for Business Location

Dallas on-premises SharePoint users

▼
On-premises
Office 365

Seattle on-premises SharePoint users

▼
On-premises
Office 365

Dallas Office 365 SharePoint users

▼
On-premises
Office 365

Seattle Office 365 SharePoint users

▼
On-premises
Office 365

ANSWER:

Answer Area

End-users

Dallas on-premises SharePoint users

▼
On-premises
Office 365

Seattle on-premises SharePoint users

▼
On-premises
Office 365

Dallas Office 365 SharePoint users

▼
On-premises
Office 365

Seattle Office 365 SharePoint users

▼
On-premises
Office 365

Explanation:

Box 1: On-premises

You must configure the Dallas SharePoint farm as a hybrid environment with the Office 365 tenant.

Box 2: Office 365

Seattle: You must implement a new SharePoint environment.

Box 3: Office 365

You must configure the Dallas SharePoint farm as a hybrid environment with the Office 365 tenant.

Box 4: Office 365

Seattle: You must implement a new SharePoint environment.

QUESTION NO: 4

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You need to design a logical architecture for the procurement team site.

You implement metadata navigation for each library.

Does the solution meet the goal?

A. Yes

B. No

ANSWER: B

QUESTION NO: 5 - (HOTSPOT)

HOTSPOT

You are the administrator for a SharePoint 2016 farm. You configure an App Catalog and a SharePoint Store.

Users report that they get an error when try to add an app to their sites.

You need to allow users to add apps from the SharePoint Store and ensure that all previously requested apps are added.

For each requirement, what should you do? To answer, drag the appropriate action to the correct requirement. Each action may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

Hot Area:

Answer Area

Requirement

Action

Investigate the issue with adding errors

- Configure SharePoint Store settings to allow end users to purchase apps
- Enable installation of apps that require accessible Internet-facing endpoints
- Set and enable the URL for the SharePoint app store

Install all apps requested by user

- Purchase additional app licenses
- Approve user app requests that originate from the App Catalog
- Add apps that cannot be installed to a Monitored Apps list and analyze installation errors
- Collect the required apps list from users and add them manually

ANSWER:

Answer Area

Requirement

Action

Investigate the issue with adding errors

- Configure SharePoint Store settings to allow end users to purchase apps
- Enable installation of apps that require accessible Internet-facing endpoints
- Set and enable the URL for the SharePoint app store

Install all apps requested by user

- Purchase additional app licenses
- Approve user app requests that originate from the App Catalog
- Add apps that cannot be installed to a Monitored Apps list and analyze installation errors
- Collect the required apps list from users and add them manually

QUESTION NO: 6

You deploy a SharePoint2016 environment.

You configure outgoing email settings for all SharePoint Servers.

You need to enable encrypted communication between all SharePoint Servers and the enterprise SMTP server.

Which two actions should you perform? Each correct answer presents part of the solution.

- A. Configure the SMTP server to support the TLS 1.0, TLS 1.1. or TLS 1.2 protocols.
- B. Install a server certificate on the SharePoint Server.
- C. Configure the SMTP server to support the SSL 2.0 or SSL 3.0 protocols.
- D. Enable STARTTLS encryption on the SharePoint Servers.
- E. Enable STARTTLS encryption on the enterprise SMTP server.

ANSWER: A E

QUESTION NO: 7 - (DRAG DROP)

DRAG DROP

You need to ensure that users can share sales data.

For each authentication method, which option should you use? To answer, drag the appropriate option to the correct authentication method. Each option may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Select and Place:

Options	Authentication method	Option
S2S authentication	Account for Office Online Services	
SAML authentication	Authentication for Excel Online	
oData authentication	Authentication for PowerPivot	
Network Service account		
Local Administrator account		
Authenticated users		

ANSWER:

Options	Authentication method	Option
S2S authentication	Account for Office Online Services	Network Service account
SAML authentication	Authentication for Excel Online	Authenticated users
oData authentication	Authentication for PowerPivot	Authenticated users
Network Service account		
Local Administrator account		
Authenticated users		

QUESTION NO: 8

You need to implement the Sales Progress website.

Which service application should you create and configure?

- A. a Business Data Connectivity Service application
- B. an Application Management Service application
- C. the Access Service 2010 service application
- D. the PerformancePoint Services application

ANSWER: D

QUESTION NO: 9 - (DRAG DROP)

DRAG DROP

Contoso, Ltd. plans to move team sites from an on-premises SharePoint environment to the cloud. You register the contoso.com domain with Office 365.

You need to configure the Office 365 environment for the hybrid infrastructure before you configure the on-premises environment.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Select and Place:

Actions

Create a synchronization connection with Active Directory Domain Services for the User Profile service.

Synchronize user accounts with Office 365.

Run the Hybrid Picker.

Assign licenses to users.

Assign a UPN domain suffix.

Answer area

ANSWER:

Actions

Create a synchronization connection with Active Directory Domain Services for the User Profile service.

Run the Hybrid Picker.

Answer area

Assign a UPN domain suffix.

Synchronize user accounts with Office 365.

Assign licenses to users.

QUESTION NO: 10

You need to configure SharePoint to support the required common document properties.

Which two actions should you perform? Each correct answer presents part of the solution.

- A. Activate the Metadata Navigation and Filtering feature.
- B. In each site collection, define content types and site columns.
- C. Create a site collection. Define content types and site columns.
- D. Activate the Content Type Syndication Hub feature.
- E. Create a library. Create columns and save the library as a template.

ANSWER: C D

Explanation:

The requirement is to manage the field settings from a single place. For that, content type hub should be implemented.

From scenario: Every file stored within the system must contain the following common document properties: ▪ Document Status

- Department
- Author
- Enterprise Keywords

You must be able to manage file metadata settings from a single location. When you make changes to settings, the changes must be applied to site collections and existing documents. This location must not be a part of the existing marketing, HR, or procurement team sites.
