## QUESTION NO: 1

When multiple developers are involved, which Migration Manager feature would enable each developer to create a migration package containing only their changes?

- A. a private migration collection
- B. a new migration group with default dependencies
- C. a snapshot migration package
- D. a merged migration package

**ANSWER: C**

## QUESTION NO: 2

How does IBM Maximo Asset Health Insights communicate with IBM Prescriptive Maintenance on Cloud?

- A. through a cloudant database and the IOTHISTORIAN crontask
- B. using an inbound processing queue
- C. through rest APIs using the IOTHIST object structure
- D. through integration queues using MXPM ASSET object structure

**ANSWER: A**

## QUESTION NO: 3

Which two features are available through Automation Scripting?

- A. creation of REST APIs
- B. creation of lookups
- C. creation of new object structures
- D. automated documentation

E. creation of Java class file

**ANSWER: C E**

## QUESTION NO: 4

Which statement is true regarding uncertainty data for calibrations performed in Maximo for Life Sciences?

- A. Maximo for Life Sciences performs the uncertainty calculations and records the information in the job plan.
- B. Maximo for Life Sciences performs the uncertainty calculations, however the data is non-persistent and not recorded in Maximo.
- C. Maximo for Life Sciences does not provide for the recording of uncertainty data.
- D. Third party software is typically used for performing the uncertainty calculations, which are uploaded into Maximo for Life Sciences via batch process or integration.

**ANSWER: B**

## QUESTION NO: 5

Which two Maximo Enterprise Asset Management (EAM) applications can the General Ledger (GL) Account Structure be modified?

- A. Database Configuration
- B. Organization
- C. Chart of Accounts
- D. Site
- E. Application Designer

**ANSWER: B C**

## QUESTION NO: 6

Which two ways can Weather data impact an Asset Health Score?

- A. Score can be impacted by humidity.
- B. Score can be impacted by the weather forecast.
- C. Score can be impacted by the season.
- D. Score can be impacted by temperature.
- E. Score cannot be impacted by weather.

**ANSWER: B C**

## QUESTION NO: 7

Which of the following is true concerning the Reliability Engineering security group?

- A. it is created when Maximo Asset Health Insights (MAHI) is installed but needs to be associated to the organizational roles
- B. it is created so users can access the Business Analysis Work Center
- C. it is created when Maximo Asset Health Insights (MAHI) is installed
- D. it is created when Maximo Asset Health Insights (MAHI) is installed but needs to be associated to the assets and locations

**ANSWER: D**

## QUESTION NO: 8

Which two statements are true about model types in Maximo Asset Performance Management (APM) that include statistical, machine learning and AI models?

- A. Machine learning learns from data, rather than applying specific rules.
- B. AI models are most appropriate for sensor-based data.
- C. Statistical models use selected algorithms to analyze data to find correlations.
- D. Statistical models are able to change algorithms dynamically, as the data changes, without intervention.
- E. AI systems must be programmed to the type of data being considered.

**ANSWER: C D**

## QUESTION NO: 9

What is the term used when a formula is not associated to any Maximo Business Object (MBO) attribute?

- A. Object Formula
- B. Persistent Formula
- C. Consistent Formula
- D. Non-consistent Formula

**ANSWER: A**

## QUESTION NO: 10

Which two actions can the reliability engineer perform from the Asset Performance Management (APM) UI, when a trained model instance is available for an asset group?

- A. apply the trained model to another group of assets
- B. schedule how frequently the model should be run
- C. modify the asset attributes that the model is trained on
- D. select another algorithm to use in the predictive model
- E. enable/disable the model instance

**ANSWER: A D**
