QUESTION NO: 1

What size does the server log file grow to before it rolls over?

- A. 10
- B. 15
- C. 20
- D. 25

ANSWER: C

QUESTION NO: 2

What is purpose of the Pickup Folder in SAP Mobile Platform (AMP) 3.0?

- A. It is a folder on the file system where archived system logs are stored before they are consolidated for reporting usage.
- B. It is a folder on the file system used by SMP 3.0 to store performance, log and error data to be used by the SAP Solution Manager.
- C. It is a folder on the file system where OSGi type libraries are stored to be deployed to an SAP Mobile Platform OSGi based server environment.
- D. It is a folder on the file system that SMP 3.0 uses to store application definitions to be used in a cluster server environment.

ANSWER: C

QUESTION NO: 3

How does the OData delta token improve application performance? Note: There are 2 correct answers to this question.

- A. By adding a delta link at the bottom of the response from the OData producer used by the SAP Mobile Platform.
- B. By allowing SAP Mobile Platform to calculate the difference in the data between the client and server.
- C. By using the OData producer to calculate the changes, then sending them to SAP Mobile Platform during synchronization.
- D. By enabling the use of a persisted hash of the previous query after the server performs another full query of the OData service.

ANSWER: A D

QUESTION NO: 4

What are the advantages of running applications offline using SAP Mobile Platform (SMP)?

Note: There are 3 correct answers to this question.

- A.** Simplifies application administration by automatically sizing and resizing synchronization tables based on data sync usage patterns.
- B.** Improves user experience by enabling users to continue to use applications in situations where there is limited connectivity.
- C.** Improves performance by accessing offline data instead of sending data requests to SMP?
- D.** Supports entire business processes that must be executed by a user while the application is not connected.
- E.** Provides a specific option to store application data only on the SMP 3.0 server in order to eliminate backend synchronizations and reduce network traffic.

ANSWER: B C D

QUESTION NO: 5

What is the minimum SAP Mobile Platform SP required to use Solution Manager for reporting?

- A.** SP1
- B.** SP2
- C.** SP3
- D.** SP4

ANSWER: C

QUESTION NO: 6

What is secured by the mobile device data security? there are 3 correct answer.

- A.** Device data
- B.** Device client database

- C. Device Vault
- D. Device Network
- E. Device Application

ANSWER: A B C

QUESTION NO: 7

Which authentication providers can you select to configure an application security profile?

Note: There are 2 correct answers to this question.

- A. X.509 User Certificate
- B. Anonymous endpoint
- C. HTTPS connection credentials
- D. Kerberos

ANSWER: A D

QUESTION NO: 8

Solution Manager can monitor system changes, such as OS-level changes and database changes. What is the name of this functionality?

- A. Technical Available Monitoring
- B. End-to-End Change Analysis
- C. Workload Analysis
- D. End-to-End Tracing

ANSWER: B

QUESTION NO: 9

It is possible to collect a trace from all systems that an app touches from devices to SAP Mobile Platform, to SAP Gateway, to the SAP backend. What are the prerequisites to use this functionality? Note: There are 2

correct answers to this question.

- A. The user must agree to this tracing.
- B. The Technical Availability Monitoring (TAM) must be enabled.
- C. The tracing must be turned on from the device
- D. Application developers must use the features oT SMP in their native or hybrid apps.

ANSWER: C D

QUESTION NO: 10

Which check box should be selected when configuring the backend for an application using integration gateway?

- A. Kerberos Support
- B. Use System Proxy
- C. Internal
- D. Allow Anonymous Access

ANSWER: D
