## QUESTION NO: 1

What sandbox type would be appropriate for diagnosing reports of poor performance when accessing certain Visualforce pages?

- A. Full Sandbox
- B. Developer Pro Sandbox
- C. Developer Sandbox
- D. Partial Copy Sandbox

**ANSWER: A**

## QUESTION NO: 2

Universal Containers (UC) has multi-cloud architecture in a single org. The Sales Cloud dev team is working in a Dev Pro sandbox (DevPro1) of delivering a release in three months. The business requirements from Service Cloud warrant a quicker release in four weeks, but need part of the Sales Cloud work that is completed in DevPro1. The decision of using a separate Dev Pro sandbox (DevPro2) is still pending. The DevPro1 was upgraded to preview for next salesforce major release two weeks ago.

What should an Architect recommend?

- A. DevPro1 cannot be cloned because it is on a different version from Production. Just create a new DevPro2, and migrate metadata from DevPro1.
- B. Ask the second work stream team to work on the same DevPro1 sandbox.
- C. Push back on the requirements because adding another work stream will bring some risks with it
- D. Clone the DevPro1 sandbox and name it DevPro2 for the second work stream to work on the Service Cloud requirements

**ANSWER: C**

## QUESTION NO: 3

Universal Containers (UC) is implementing Service Cloud for their contact centers for 3,000 users. They have approximately 10 customers. The average page response time expected is less than 5 seconds with 1,500 concurrent users.

What type of testing will help UC measure the page response time?

- A. Unit Testing

- B. System Integration Testing
- C. Load Testing
- D. Stress Testing

**ANSWER: C**

## QUESTION NO: 4

Universal Containers (UC) has recently acquired other companies that have their own Salesforce orgs. These companies have been merged as new UC business units.

The CEO has requested an architect to review the org strategy, taking into consideration two main factors:

- The CEO wants business process standardization among all business units.
- Business process integration is not required as the different business units have different customers and expertise.

Which org strategy should the architect recommend in this scenario, and why?

- A. Single-org strategy, as the high level of business process standardization will be easier to implement in a single org.
- B. Multi-org strategy, as they could deploy a common managed package into the orgs of the different business units.
- C. Single-org strategy, as costs increase as the number of orgs go up.
- D. Multi-org strategy, as it is uncommon for the diversified business units to get used to working in the same space as the other business units.

**ANSWER: C**

## QUESTION NO: 5

Universal Containers' (UC) deployment of Salesforce customizations has increased over time, leading to complexities. UC is finding too many bugs in the deployed code, which has become a challenge to the delivery team. The team wants to reduce the amount of bugs by ensuring all the developed code is reviewed, tested, and validated in the upstream deployment process.

Which three development practices will be best suited to address UC's concerns? (Choose three.)

- A. Encourage the development team to be self-organizing.
- B. Enable developer teams to do peer code review.
- C. Incorporate test-driven development into the project structure.
- D. Use continuous integration with automated testing.

E. Enable a short and timely feedback loop with customers.

**ANSWER: B C D**

## QUESTION NO: 6

Universal Containers (UC) is hiring offshore agile development teams to decrease costs and enhance UC's capability of delivering new features to its customers. However, the CTO is not able to follow or measure the work of those teams.

What should an architect recommend to increase transparency?

- A. Schedule a daily stand-up meeting with representatives of all offshore teams to share the progress of the teams
- B. Request the offshore teams to share their work in progress in a virtual Kanban board tool
- C. Ask the offshore teams to add their progress and status in a shared spreadsheet
- D. Request the offshore teams to send daily emails to the CTO with the progress of the teams

**ANSWER: C**

## QUESTION NO: 7

Universal Containers has development teams working on multiple projects. They are exploring a source control tool to track and manage their code/configuration. Which two benefits does a source control tool provide? (Choose two.)

- A. Provides automated code/configuration deployments.
- B. Provides the ability for distributed teams to work in isolation.
- C. Provides the ability to back up code/configuration changes.
- D. Provides the ability to automatically identify issues in code/configuration.

**ANSWER: B C**

## QUESTION NO: 8

What are three advantages of using the SFDX? (Choose three.)

- A. Can install application metadata from a central repository
- B. Can store code on a local machine, or a version control system

- C. Can use native Deployment Rollback Tool to quickly revert to prior state
- D. Can create scratch orgs
- E. Can quickly deploy metadata using Execute Anonymous

**ANSWER: B C E**

## QUESTION NO: 9

A developer was trying to retrieve the metadata from an org and ran the `sfdx force:source:retrieve` command. When the command was run, the developer received the error message: "This command is required to run from within an SFDX project".

What can be two possible reasons that caused this problem? (Choose two.)

- A. The developer created the project, but ran the command outside of the project directory
- B. The developer created the project within VSCode, but ran the command in a separate terminal
- C. The developer hadn't run the `sfdx force:project:create` command
- D. The developer forgot to add the `-n` option with a project name as a command line argument

**ANSWER: B D**

## QUESTION NO: 10

Universal Containers (UC) is working with Salesforce CPQ, which uses configuration SObjects to drive business logic.

What are two best practice recommendations an architect should propose to allow UC to deploy CPQ features as part of their CI/CD process? (Choose two.)

- A. Use a third-party product
- B. Use data loader to deploy CSV files
- C. Build an Apex framework to deploy CPQ records
- D. Use an open source SFDX plugin and version control

**ANSWER: B D**
