QUESTION NO: 1

You are tasked with creating a new integration in OIC that will be exposed to clients as a SOAP web service. In addition, this integration will be invoking an external SOAP web service as part of the orchestration flow logic.

In your creation of these SOAP adapter connection components, which is a valid consideration? (Choose the best answer.)

- A. The WSDL URL property value can be defined by uploading a file for either the inbound Trigger connection or the outbound Invoke connection configurations.
- B. You must explicitly specify the target server TLS version for the external web service outbound Invoke connection configuration.
- C. Suppress insertion of timestamp into the request and Ignore timestamp in the response message are optional fields only for the outbound Invoke connection configuration.
- D. The SAML and OAuth security policies are available options for creating either the inbound Trigger connection or the outbound Invoke connection configurations.

ANSWER: C

QUESTION NO: 2

Which three are scenarios where Managed File Transfer (MFT) is a valid approach? (Choose three.)

- A. In integration scenarios where it is important to use either compression and/or encryption in the transfer process.
- B. Oracle MFT can be used in conjunction with Oracle Integration Cloud (OIC) to push files for processing by OIC.
- C. File adapters remove the need to ever have to use MFT.
- D. File Transfer is an old, outdated method of sharing information and should not be used.
- E. Many SaaS applications still use files as a means for sharing data, so MFT capabilities are still very important.

ANSWER: A B E

QUESTION NO: 3

Which three are types of certificates that can be imported from Settings? (Choose three.)

- A. Multi Domain SSL Certificate
- B. Identity Certificate
- C. Unified Communications Certificate

D. Message Protection Certificate

E. Trust Certificate

ANSWER: B D E

QUESTION NO: 4

Which JNDI name value must be provided when configuring the properties of a new database adapter outbound connection pool to support dependent SOA composite applications?

- A. The corresponding XA datasource configuration deployed to the same WebLogic cluster.
- B. The corresponding XA enterprise resource adapter application deployed to the same WebLogic cluster.
- C. The associated XA database adapter plan deployed with this database adapter outbound connection pool.
- D. The defined XA database adapter connection factory configured for this WebLogic domain.

ANSWER: B

QUESTION NO: 5

Which is NOT an activity that an application developer (API consumer) can perform in the Developer Portal in API Platform Cloud Service? (Choose the best answer.)

- A. Monitor performance
- B. Subscribe to a plan
- C. Create an API
- D. Learn about APIs
- E. Test an API
- F. Create Application

ANSWER: C

QUESTION NO: 6

What options are available for Escalation and Expiration of human tasks in the Processes feature of OIC? (Choose the best answer.)

- A. Escalate, Restart, Next, or Previous

- B. Renew, start, end, or error
- C. Never Escalate, Skip, hierarchy, or New
- D. Never expire, Expire, Renew, or Escalate

ANSWER: D

QUESTION NO: 7

You have a synchronous integration flow updating systems with several external invocations. Most client applications are experiencing timeouts waiting for the synchronous response confirmation of the complex processing logic.

Which is a legitimate strategy that will mitigate this issue? (Choose the best answer.)

- A. Change the design implementation strategy to an asynchronous flow that provides a separate notification to clients when the processing is complete.
- B. Increase the blocking timeout within the OIC integration settings to allow for extended time.
- C. Split into smaller synchronous integration flows that can be orchestrated sequentially from a master synchronous flow.
- D. Change the implementation logic to invoke multiple fine-grained external API calls within a single loop.

ANSWER: D

QUESTION NO: 8

When a connection is in edit mode and the browser crashes, the connection becomes locked, which then prevents it from being edited.

Which two users can unlock the connection? (Choose two.)

- A. the same user who has edited the connection
- B. a user with the Designer Role
- C. any user
- D. a user with the Administrator Role

ANSWER: A D

QUESTION NO: 9

Which two types of authentication mechanisms are available for Service Account configurations in API Platform Cloud Service? (Choose two.)

- A. Kerberos
- B. WSS Username Token
- C. OAuth credentials
- D. SAML
- E. Basic Authentication

ANSWER: C E

QUESTION NO: 10

Which two statements correctly define the use cases for Business Process Execution Language (BPEL) vs. Business Process Modeling Notation (BPMN) vs. Enterprise Service Bus (ESB)?

(Choose two.)

- A. BPEL is inherently better than BPMN in managing orchestrations that involve people, because BPEL can also interact with systems.
- B. BPEL and ESB are both good technologies for doing heavy transformations of data before sending the data to a back-end system or database.
- C. All are part of a typical/traditional on-premise enterprise integration strategy and can also be an important part of a hybrid on-premises/Cloud architecture.
- D. An ESB is used primarily for stateless messages and service mediation. The ESB construct is being replaced by API's and API Gateways in modern Cloud architectures.
- E. Decision Model and Notation (DMN) replaces BPMN in modern Cloud Architectures.

ANSWER: B D
